My Portfolio: mdw223.github.io/malik-portfolio/

EDUCATION

NC State University | Expected Graduation – December 2026

Bachelor of Science in Computer Science, GPA: 3.71

Raleigh, NC

EXPERIENCE

Full-Stack Software Engineering Intern | Axiom Software | Enterprise Startup | 02/2025 – 02/2026

Axiom Software — Startup CRM Software Company — Cary, NC

- Built Gmail and Outlook integration with OAuth 2.0 authentication, automated email campaigns, and real-time email, contact, and calendar synchronization using REST APIs, Google Pub/Sub webhooks, and Hangfire background job processing
- Delivered enterprise-level calendar integrations for Google Calendar, Outlook Calendar, and Calendly, enabling users to view, create, and manage events directly within the Axiom Workspace CRM
- Implemented Calendly webhook integration with HMAC signature verification, full event lifecycle management (create, reschedule, cancel), and automated contact creation for seamless meeting scheduling
- Developed comprehensive favorites system across CRM entities using Angular, C#, and SQL Server, implementing star-based UI with Material Design and user-scoped database architecture
- Engineered drag-and-drop prospect list management system with pagination, sort order persistence, and contact search functionality using Angular and RESTful APIs
- Authored automated front-end unit and integration tests using Jest, achieving 80%+ line and statement code coverage across critical UI components and service layers

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, Go, Python, Java, HTML, CSS/SCSS

Frameworks & Technologies: Angular, React, .NET Core, ASP.NET Web API, Node.js, Bootstrap

DevOps & Cloud: Docker, Docker Compose, Google Cloud, Azure, Hangfire, CI/CD

Databases: SQL Server, PostgreSQL, MySQL

APIs & Integration: REST APIs, Gmail API, Google Calendar API, Microsoft Graph API, Calendly API, OAuth 2.0, Webhooks, Pub/Sub, n8n, Evolution API

Testing: Jest, Unit Testing, Integration Testing, Test Coverage Analysis

Developer Tools: Git, GitHub, Visual Studio, VS Code, Postman, Azure DevOps, Jenkins

Core Skills: Full-Stack Development, API Integration, Database Design, Agile/Scrum, Open Source Development

PROJECTS

Enterprise Calendar Integration Suite | C#, Google, Microsoft, Calendly API, Angular 10/2025 – 12/2025

- Architected and delivered full enterprise-level calendar integrations for Google Calendar, Outlook Calendar, and Calendly within a production CRM, enabling unified event management across platforms
- Implemented bidirectional sync with OAuth 2.0 and token refresh flows, supporting event creation, editing, cancellation, and rescheduling from a single CRM interface
- Built webhook-driven real-time update pipeline for live calendar event propagation and conflict detection
- Designed normalized SQL Server schema to persist multi-provider calendar data with user-scoped access control

Islamic Calendar Sync | React, JavaScript, Docker Compose | Open Source, Full-Stack 01/2026 – Present

- Built an open-source full-stack web application that syncs Islamic calendar events (Hijri dates, prayer times, holidays) with users' personal calendars via ICS file generation and subscription
- Designed a React front-end with dynamic event filtering and a RESTful API back-end for ICS feed generation and calendar data management
- Containerized the full application stack with Docker Compose for reproducible local development and straightforward self-hosted deployment

OpenDI Model Hub – Senior Design | Go, React, Python, Docker 01/2026 – Present

- Leading full-stack development of a Docker Hub-inspired platform for sharing, versioning, and managing OpenDI-compliant decision models as a senior capstone project

- Built a Go REST API back-end with model registry, versioning logic, and user authentication; React front-end with model browsing, search, and upload workflows
- Developed a companion Python CLI tool enabling developers to push, pull, and manage decision models directly from the terminal against the hosted registry

NC Triangle Muslims – WhatsApp Events Automation | *n8n, React, JavaScript, Docker* 01/2026 – Present

- Built an end-to-end event automation pipeline using n8n workflows and the Evolution API to detect, parse, and publish community events from a WhatsApp group to the NC Triangle Muslims website automatically
- Designed natural language parsing logic to extract event title, date, time, and description from unstructured WhatsApp messages and map them to structured website data
- Containerized the automation stack with Docker for reliable self-hosted deployment; integrated with a React front-end to display live event listings

Calendly Integration & Webhook Processing | *C#, Calendly API, Azure, Webhooks* 07/2025 – 09/2025

- Built complete Calendly integration with webhook subscription management and HMAC secure signature verification
- Created comprehensive event lifecycle management handling creation, rescheduling, and cancellation workflows
- Developed contact matching algorithms with automatic contact creation and deduplication logic
- Implemented activity tracking system for meeting scheduling analytics and management reporting

Gmail Integration & Email Campaign System | *Gmail API, OAuth 2.0, Hangfire, Pub/Sub* 05/2025 – 08/2025

- Developed full Gmail integration with OAuth 2.0 authentication flow and automated refresh token management
- Built automated email campaign system with template parsing, dynamic personalization, and delayed scheduling
- Implemented real-time email synchronization using Google Pub/Sub webhooks and Azure cloud deployment
- Created scalable background job processing with Hangfire for delayed campaign execution and contact syncing

Interactive Prospect Management Dashboard | *Angular, SQL, REST APIs* 03/2025 - 05/2025

- Transformed static prospect lists into dynamic, interactive interfaces with pagination
- Implemented drag-and-drop reordering functionality with real-time database updates
- Built sophisticated order management system with automatic position shifting
- Created seamless integration between list and card view modes
- Developed contact search and addition functionality with autocomplete
- Designed responsive UI components using Angular Material with custom SCSS styling

Favorites System Implementation | *Angular, C#, SQL Server, Material Design* 02/2025

- Designed comprehensive favorites system across multiple entities including campaigns, lists, contacts, and companies
- Created intuitive star-based UI with hover effects and visual feedback for enhanced user experience
- Built complete API chain from Angular frontend to C# backend controllers with SQL database integration
- Implemented user-level favorites using junction tables to ensure scalable multi-user support
