SUMMARY

Full-stack software engineer with ~1.5 years of hands-on experience in React, Python, and C# architecting and delivering secure, scalable web applications. Proven ability to build real-time API integrations, enterprise CRM features, and offline-first PWAs that drive measurable business outcomes and improve security posture. Ready to tackle complex engineering challenges with a security-first approach and a track record of impactful, production-deployed solutions.

EDUCATION

NC State University | Bachelor of Science in Computer Science

GPA: 3.71 (Graduating December 2026)

Raleigh, NC

EXPERIENCE

Consultant Full-Stack Web Developer | Freelance | 04/2026 – Present (While completing B.S. in CS)

Self-Employed — Remote

- Partnered with clients to architect and deliver scalable full-stack applications using React, TypeScript, Python/FastAPI, and PostgreSQL with Docker containerization and automated CI/CD pipelines, reducing client deployment time by 40%
- Engineered secure PDF viewer DRM system (blinkDoc) protecting sensitive documents from unauthorized access via server-side rasterization, dynamic watermarking, IP-bound JWT sessions, and iframe sandboxing
- Implemented automated deployment pipelines using GitHub Actions, VPS hosting, and GitHub Pages, enabling zero-downtime releases and eliminating manual deployment overhead
- Designed RESTful APIs with a comprehensive security middleware stack — rate limiting, request/response sanitization, structured logging, CORS hardening, and httpOnly cookie-based auth — reducing attack surface across all client projects

Full-Stack Software Engineer | Axiom Software | 02/2025 – 02/2026

Axiom Software — Startup CRM Software Company — Cary, NC

- Built Gmail and Outlook integrations with OAuth 2.0, enabling 1,000+ users to automate email campaigns and achieve real-time email, contact, and calendar synchronization, boosting sales team productivity by 15%
- Delivered enterprise-level calendar integrations for Google Calendar, Outlook Calendar, and Calendly, allowing users to manage 5,000+ events monthly directly within the CRM and reducing context-switching by 20%
- Implemented Calendly webhook integration with HMAC signature verification and full event lifecycle management (create, reschedule, cancel), eliminating manual scheduling overhead for sales workflows
- Engineered a star-based favorites system and drag-and-drop prospect list manager across CRM entities using Angular, C#, and SQL Server, cutting user navigation time and streamlining workflow efficiency
- Authored automated front-end unit and integration tests with Jest, achieving 80%+ line and statement code coverage across critical UI components and service layers, decreasing post-deployment bug reports by 30%

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, Python, Go, Java, HTML, CSS/SCSS

Frontend: React, Angular, Vite, Material UI (MUI), Bootstrap, PWA/Service Workers

Backend: FastAPI, Express.js, ASP.NET Web API, .NET Core, Node.js, Passport.js

DevOps & Cloud: Docker, Docker Compose, GitHub Actions, CI/CD, Google Cloud, Azure, Cloudflare R2, Nginx

Databases: PostgreSQL, SQL Server, Redis, MySQL, IndexedDB/Dexie.js

APIs & Integration: REST APIs, OAuth 2.0 (Google, Microsoft, Apple), JWT, Webhooks, Gmail API, Google Calendar API, Microsoft Graph API, Calendly API, Pub/Sub, n8n, Evolution API

Testing: Jest, Pytest, Unit Testing, Integration Testing

Security: JWT Authentication, HMAC Verification, Rate Limiting, Request/Response Sanitization, XSS Prevention, httpOnly Cookies, CORS

Developer Tools: Git, GitHub, Visual Studio, VS Code, Postman, Azure DevOps, Jenkins, Alembic Migrations

PROJECTS

- blinkDoc** (Secure PDF DRM) | *Python, FastAPI, React, PostgreSQL, Docker, Cloudflare R2* 04/2026 – Present
- Architected secure PDF viewer DRM system with server-side rasterization using PyMuPDF and Pillow, delivering watermarked 256x256 PNG tiles via FastAPI to prevent raw PDF exposure in the browser
 - Implemented multi-layer security architecture: canvas-only rendering, short-lived JWT tokens (30s TTL), IP-bound sessions, dynamic per-tile watermarks (email + IP + timestamp), and iframe sandboxing
 - Built comprehensive admin dashboard with React for document management, user permissions, folder organization, CSV import, and audit logging with role-based access control
 - Designed multi-tenant LMS client architecture with API key authentication and WordPress LifterLMS plugin integration for seamless course content protection
 - Implemented cloud storage abstraction with Cloudflare R2, supporting both local disk (dev) and S3-compatible object storage (production) via unified storage service layer
- Islamic Calendar Sync** (Open-Source PWA) | *React, Express.js, PostgreSQL, Redis* 01/2026 – Present
- Built open-source full-stack PWA syncing Islamic calendar events to users' personal calendars via ICS file generation and live subscription feeds with automatic updates
 - Implemented offline-first architecture using IndexedDB/Dexie.js with automatic sync-on-login, enabling full functionality without network connectivity and seamless data reconciliation
 - Designed defense-in-depth authentication system with Google OAuth 2.0, magic link email (Passport.js), JWT in httpOnly cookies, and PBKDF2-hashed subscription tokens
 - Architected API middleware stack with Redis-backed rate limiting, request/response sanitization, structured logging via Winston, and CORS protection
 - Containerized multi-service architecture (React, Express, PostgreSQL, Redis, Nginx) with Docker Compose; deployed via split hosting (GitHub Pages + VPS) with automated CI/CD
- OpenDI Model Hub** (Decision Model Registry) | *Go, React, Python, Docker* | Senior Capstone 01/2026 – 05/2026
- Led full-stack development of a Docker Hub-inspired platform for sharing, versioning, and managing OpenDI-compliant decision models
 - Built a Go REST API back-end with model registry, versioning logic, and user authentication; React front-end with model browsing, search, and upload workflows
 - Developed a companion Python CLI tool enabling developers to push, pull, and manage decision models directly from the terminal against the hosted registry
- NC Triangle Muslims** (WhatsApp Event Automation) | *n8n, React, JavaScript, Docker*
- Built an end-to-end event automation pipeline using n8n and the Evolution API to detect, parse, and publish community events from WhatsApp to the website automatically
 - Designed natural language parsing logic to extract event title, date, time, and description from unstructured WhatsApp messages and map them to structured website data
 - Containerized the automation stack with Docker for reliable self-hosted deployment; integrated with a React front-end to display live event listings
- Enterprise Calendar Integration** (Multi-Provider CRM Sync) | *C#, Angular, Google APIs* 10/2025 – 12/2025
- Architected and delivered enterprise-level calendar integrations for Google Calendar, Outlook Calendar, and Calendly within a production CRM, enabling unified event management across platforms
 - Implemented bidirectional sync with OAuth 2.0 and token refresh flows, supporting event creation, editing, cancellation, and rescheduling from a single CRM interface
 - Built webhook-driven real-time update pipeline for live calendar event propagation and conflict detection
 - Designed normalized SQL Server schema to persist multi-provider calendar data with user-scoped access control
